OVERVIEW

A disciplined Computer Science graduate and versatile Software Engineer specialized in building end-to-end applications with Python, Node.js, and React. Experienced in Backend Architecture and integrating Agentic AI to solve complex problems. Committed to writing clean, scalable code and collaborating on high-impact software solutions across diverse tech domains.

EDUCATION

University of Phayao

BSc in Computer Science (First Class Honours)

- GPA: 3.53

Phayao, Thailand

June 2022 - March 2026

Languages

Thai (Native), English (Basic)

SKILLS

- Programming Languages:** Python, JavaScript, SQL, HTML, PHP, Matlab
- Web Development:** React, Node.js, Next.js, FastAPI, Tailwind CSS, RESTful API
- AI & Machine Learning:** Pandas, Scikit-learn, LangChain, AutoGen Studio, YOLO, PyThaiNLP
- Tools & Databases:** MySQL, PostgreSQL, Git, GitHub, Figma, XAMPP, Docker
- Other Skills:** Deep Learning, Unity
- Soft Skills:** Problem Solving, Team Collaboration, Critical Thinking, Active Listening

PROJECTS

Writings Scoring System With Agentic AI (Final Project / Team Project)

March 2024

- Developed a web-based exam platform using React and Node.js to grade subjective answers.
- Implemented Agentic AI with AutoGen Studio to suggest scores based on teacher and student answers.

Face Recognition (Team Project)

October 2025

- Web to forecast classmates and check if they're wearing glasses.
- Collect face data from classmates and create a YOLO model.

Smart Tax (Team Project)

November 2025

- Developed OCR-based system to extract text from receipts.
- Using text mining techniques to classify receipts for tax deduction categories.

Agents Analysis Stock Web (Team Project)

January 2026

- Created Agents Workflow to analysis stock using different categories datasource.
- Manage the backend system and contact devops team to deploy.

RPCA Select Stock (Team Project)

February 2026

- Applied Robust Principal Component Analysis (RPCA) to choose the best of stock.
- Collection Data in each size(Assets, Sector, Stock).

Chat Bot with Langchain (Personal Project)

In Process

- Developed a RAG-based AI assistant to provide accurate answers from custom business documents.
- Designed an Agentic workflow using Gemini and tool-calling to automate context retrieval.

EXPERIENCE

Guest Lecturer - About Supervised and Unsupervised learning

July 2025

- Taught the basics of model creation (KNN and K-mean) and performance evaluation to junior students.

TRINITY (Data Science Intern)

November 2025 - February 2026

- Data collection, model building and back-end system management.

CU-VET Hackathon (Team Project)

March 2026

- A model was created for voice separation to aid in rabies screening.
